Description 3.8cc horizontal compressor  
(20-30) Volt Input  
HFC/HFO Refrigerants  
Standard Compressor  
With Thermal Switch

## Compressor Application Notes:

1. Compressor is supplied with 45 cc's of oil. Addition oil will be required if operating compressor in systems with long tubes, large heat exchangers or internal surfaces that can trap oil and prevent adequate return to the compressor.
2. Recommended airflow over compressor is 1 meter/sec.
3. **If replacing an older Aspen Compressor, consult with Aspen Engineering for compatibility as oil types have changed to accommodate new HC refrigerants**

### Compressor Drive & Converter Application Notes:

1. Drive Board is conformally coated, however, care should be taken to prevent operation in corrosive or wet environments. Drive board is thermally protected, however, airflow over the drive board/ converter and heat sink is highly recommended.
2. Maximum current to the compressor is automatically limited by the drive board by reducing the compressor speed as the current approaches set limits, however, a suitable inline fuse is required for branch circuit protection and safe operation. See Universal Low Noise Sinusoidal Motor Controller Instructions for installation instructions.
